

EC/AC centrifugal fans – RadiCal

ebmpapst

The engineer's choice

EC/AC centrifugal fans – RadiCal

Impellers made of high-tech compound material with optimised flow control, combined with proven single- or 3-phase asynchronous motors or highly efficient GreenTech EC motors: these are the outstanding features of the new generation of backward-curved centrifugal fans for operation without scroll housing. That's RadiCal!

The impellers in sizes 133 to 630mm are made of a single-piece special compound material which allows for high rotational speed, and thus for the high power density of the fan. The impeller styling has been optimised using complex simulation models adjusted to perfection by checking against prototypes. The result is an optimal, low-loss flow of air through the impeller and so there are no longer any drastic cross-sectional changes, a well-known source of losses in the impeller. A uniform flow profile without separations also means fewer noise sources and thus better acoustics. That's RadiCal, too!

The new motor in GreenTech EC technology with integrated control electronics is designed in such a way as to make the RadiCal fans in sizes 190 up to 250mm have the same mounting dimensions as the combination of the same impeller with an asynchronous motor. In addition, the specified EC centrifugal fan achieves significantly higher air performance than the AC variant with identical dimensions. The small GreenTech EC fans are available in two different control configurations: one with two fixed speed stages and another with the familiar continuous control option via a combined 0-10V/PWM control input. Sizes exceeding 250mm can be controlled by a 0-10V/PWM input signal or monitored respectively controlled via RS485 serial connection, using the MODBUS-RTU protocol.

This opens up entirely new possibilities for applications in ventilation and air-conditioning and beyond. For example, ebm-papst AC fans can now be replaced by the latest fans in GreenTech EC technology without any expensive modification.

Advantages at a glance:

- High efficiency with improved impeller technology and new EC motors
- Perfectly matching components (controller/motor/impeller)
- Extremely quietly running with optimised air flow through the impeller
- Significantly reduced tonal noise
- Unrivalled compactness
- Mechanical compatibility of AC and EC fans
- EC fans with 2 speeds or continuous control
- High power density
- Robust design and maintenance-free operation
- Easy initial set-up
- ErP* compliant (see individual designation)

*ErP: Energy-related Products directive – defined minimum requirements for fans in accordance with the EcoDesign directive for fans with a drive output of 125 W and above.

Sustainability is at the centre of our thoughts and actions. Out of conviction!

Eco-friendliness and sustainability have always been at the core of our thoughts and actions. For decades, we have worked according to the simple but strict creed of our co-founder Gerhard Sturm: "Each new product we develop has to be better than the last one in terms of economy and ecology." GreenTech is the ultimate expression of our corporate philosophy.

GreenTech is pro-active development.

Even in the design phase, the materials and processes we use are optimised for the greatest possible eco-friendliness, energy balance and – wherever possible – recyclability. We continually improve the material and performance of our products, as well as the flow and noise characteristics. At the same time, we significantly reduce energy consumption. Close co-operation with universities and scientific institutes and the professorship we endow in the area of power engineering and regenerative energies allows us to profit from the latest research findings in these fields – and at the same time ensure highly qualified young academics.

GreenTech is eco-friendly production.

GreenTech also stands for maximum energy efficiency in our production processes. There, the intelligent use of industrial waste heat and ground-water cooling, photovoltaics and, of course, our own cooling and ventilation technology are of the utmost importance. Our most modern plant, for instance, consumes 91% less energy than currently specified and required. In this way, our products contribute to protecting the environment, from their origin to their recyclable packaging.

GreenTech is acknowledged and certified.

Every step in our chain of production meets the stringent standards of environmental specialists and the public. The Deutscher Nachhaltigkeitspreis 2012 (German Sustainability Award 2012), where we were given the Top3-award in the category "Germany's most sustainable strategy for the future (company group)" bears testimony to our commitment to sustainability, as does the DEKRA Award 2012 we received in the category "Umwelt – Herausforderung Energiewende / Environment – Challenge: Transition to more sustainable energy systems", to name only a few of a large number of examples. The environmental advantage gained in the performance of the products developed from our GreenTech philosophy can also be measured in the fulfillment of the most stringent energy and environmental standards. In many instances, our products are already well below the thresholds energy legislation will impose a few years from now – several times over.

Our customers profit from this every day.

The heart of GreenTech is future-oriented EC technology from ebm-papst. The EC technology at the core of our most efficient motors and fans allows efficiency of up to 90%, saves energy at a very high level, significantly extends service life and makes our products maintenance-free. These values pay off not only for the environment, but every cent also pays off for the user! All ebm-papst products – even those for which GreenTech EC technology does not (yet) make sense from an application viewpoint – feature the greatest possible connection of economy and ecology.

Air performance measured as per: ISO 5801, Installation category A, with ebm-papst inlet nozzle without protection against accidental contact. Suction-side noise levels: L_{WA} as per ISO 13347, L_{PA} measured at 1 m distance to fan axis. The acoustic values given are only valid under the measurement conditions listed and may vary depending on the installation situation. With any deviation to the standard setup, the specific values have to be checked and reviewed once installed or fitted! For detailed information see page 172 ff.

Air performance measured as per: ISO 5801, Installation category A, with ebm-papst inlet nozzle without protection against accidental contact. Suction-side noise levels: L_{WA} as per ISO 13347, L_{pA} measured at 1 m distance to fan axis. The acoustic values given are only valid under the measurement conditions listed and may vary depending on the installation situation. With any deviation to the standard setup, the specific values have to be checked and reviewed once installed or fitted! For detailed information see page 172 ff.

Effects of installation space

When mounting our product in a rectangular box, air performance might be reduced.

d_h = Hydraulic diameter

Formula: $d_h = 2 \times B \times H / (B + H)$

B = Width of box

H = Height of box

D = Outer diameter of the fan

Air flow determination

The differential pressure approach compares the static pressure before the inlet nozzle with the static pressure inside the inlet nozzle. Air flow can be calculated on the basis of the differential pressure (difference in pressure of the static pressures) in keeping with the following equation:

$$q_v = k \cdot \sqrt{\Delta p} \quad q_v \text{ in [m}^3\text{/h] und } \Delta p \text{ in [Pa]}$$

If constant air flow is to be controlled to, then the nozzle pressure has to be kept constant:

$$\Delta p = q_v^2 : k^2$$

k takes into account the specific nozzle characteristics.

Differences in static pressure are measured in 1/4 measuring point(s) along the circumference of the inlet nozzle. Connection on the customer side is accomplished via a pre-mounted T tube connector. This tube connector is suited for pneumatic hoses with an internal diameter of 4 mm.

Air intake guard grilles

- **Material:** steel wire, plastic coated

Air intake guard grilles for backward curved centrifugal fans (according to EN ISO 13857)

subject to alterations

- **Pull-off protector:** The housing expands by max. 9 mm. The protector responds to overload by the generated excess pressure snapping off the internal lead in a predetermined breaking point.

- **Mounting:** c is the overall dimension of the capacitor which has to be taken into account when mounting the part. The capacitor design, however, depends on the manufacturer. The expansion (9 mm) is either added to dimension b, or it is already integrated in the capacitor.

- **Material:** Housing made of thermoplastic resin
- **Connection line:** Multi-lead PVC cable 0.5 mm² with brass lead tips
- **Approval:** VDE according to DIN EN 60252 (VDE 0560/8)
- **Calculated life time:**
400 V; -25 to +85°C; 30,000 hrs; class A

2	10	RSB	brown	RS485 interface for MODBUS, RSB, SELV
2	11	RSA	white	RS485 interface for MODBUS, RSA, SELV
2	12	GND	blue	Reference ground for control interface, SELV
2	13	+10 V	red	Fixed voltage output 10 VDC, SELV +10 V +/- 3%, max. 10 mA, short-circuit-proof, Power supply for external devices (e.g. potentiometer)

Electrical connections EC P6)

Technical features:

- PFC (passive)
- integrated PID controller
- Control input 0-10 VDC / PWM
- Output 10 VDC max. 10 mA
- Operation and alarm display
- RS485 MODBUS RTU
- Motor current limitation, Alarm relay
- Line undervoltage / phase failure detection
- Over-temperature protected electronics / motor
- Locked-rotor protection, Soft start
- Control interface with SELV potential safely disconnected from the mains

Line	No.	Connection	Colour	Assignment / function
1	1, 2	PE	green/yellow	Protective earth
1	3, 4, 5	L1, L2, L3	black	Supply voltage, see type plate for voltage range, 50/60 Hz
1	6	NC	white 1	Status relay, floating status contact, break for failure, contact rating 250 VAC / 2 A (AC1) min. 10 mA, basic insulation on mains side and reinforced insulation on control interface side
1	7	COM	white 2	Status relay, floating status contact, common connection, contact rating 250 VAC / 2 A (AC1) min. 10 mA, basic insulation on mains side and reinforced insulation on control interface side
2	8	0-10 V	yellow	Analogue input (set value), SELV 0-10 V, Impedance 100 kΩ, parametrisable curve
2	10	RSB	brown	RS485 interface for MODBUS, RSB, SELV
2	11	RSA	white	RS485 interface for MODBUS, RSA, SELV
2	12	GND	blue	Reference ground for control interface, SELV
2	13	+10 V	red	Fixed voltage output 10 VDC, SELV +10 V +/- 3%, max. 10 mA, short-circuit-proof, Power supply for external devices (e.g. potentiometer)

Electrical connections EC M4)

Technical features:

- PFC (aktive)
- integrated PID controller
- Control input 0-10 VDC / PWM
- Input for sensor 0-10 V bzw. 4-20 mA
- External 24 V input (programming)
- External release input
- Output for slave 0-10 V max. 3 mA
- Output 20 VDC ($\pm 20\%$) max. 50 mA
- Output 10 VDC ($+10\%$) max. 10 mA
- Tach output
- RS485 MODBUS-RTU
- Alarm relay
- Line undervoltage / phase failure detection
- Motor current limitation
- Output limit
- Over-temperature protected electronics / motor
- Reverse polarity and locked-rotor protection
- Soft start
- Control interface with SELV potential safely disconnected from the mains

Connector	Connection	Assignment / function
KL1	N	Mains supply connection, supply voltage 1~200-277 VAC, 50/60 Hz
	L1	Mains supply connection, supply voltage 1~200-277 VAC, 50/60 Hz
PE	PE	Earth connection, PE connection
KL2	NC	Status relay, floating status contact, option 1: break with error, option 2: break with error for run monitor error message
	COM	Status relay, floating status contact, changeover contact, common connection, contact rating 250 VAC / 2 A (AC1)
	NO	Status relay, floating status contact, option 1: close with error, option 2: close with run monitor error message
KL3	Din1	Digital input 1: enabling of electronics; enabling: open pin or applied voltage 5 to 50 VDC; disabling: bridge to GND or applied voltage < 0,8 VDC; reset function: triggers software reset after a level change to < 0,8 V
	Ain1 I	Analogue input 1 (set value); 4-20 mA; Ri= 100 Ω ; parametrisable curve; only usable as alternative to input Ain1 U
	+10 V	Fixed voltage output 10 VDC; +10 V $\pm 3\%$; max. 10 mA; short circuit proof; power supply for ext. devices (e.g. potentiometer)
	Ain1 U	Analogue input 1 (set value); 0-10 V; Ri= 100 k Ω ; parametrisable curves; only usable as alternative to input Ain1 I
	GND	Signal ground for control interface
	RSB	Bus connection RS485; RSB; MODBUS RTU
	RSA	Bus connection RS485; RSA; MODBUS RTU
	Aout	Analogue output 0-10 V; max. 5 mA; output of the actual motor control factor (output voltage of electronics)/of the actual motor speed; parametrisable curve
	Ain2 I	Analogue input 2; actual sensor value 4-20 mA; Ri= 100 Ω ; parametrisable curve; only useable as alternative to input Ain2 U
	+20 V	Fixed voltage output 20 VDC; +20 V $\pm 25/-10\%$; max. 50 mA; short circuit proof; power supply for ext. devices (e.g. sensors)
	Ain2 U	Analogue input 2; actual sensor value 0-10 V; Ri= 100 k Ω ; parametrisable curve; only useable as alternative to input Ain2 I
	GND	Signal ground for control interface
	Din3	Digital input 3: Control characteristic of the integrated controller; according to EEPROM setting, the control characteristic of the integrated controller is normally/inversely selectable per BUS or per digital input; normal: open pin or applied voltage 5 to 50 VDC; inverse: bridge to GND or applied voltage < 0,8 VDC
	Din2	Digital input 2: parameter set switch 1/2; according to EEPROM setting, the valid/used parameter set is selectable per BUS or per digital input Din2. Parameter set 1: open pin or applied voltage 5 to 50 VDC; parameter set 2: bridge to GND or applied voltage < 0,8 VDC

Electrical connections EC M5)

Technical features:

- PFC (passive)
- integrated PID controller
- Control input 0-10 VDC / PWM
- External release input
- External 24 V input (programming)
- Output 10 VDC max. 10 mA
- Operation and alarm display
- RS485 MODBUS-RTU
- Motor current limitation
- Alarm relay
- Line undervoltage / phase failure detection
- Over-temperature protected electronics / motor
- Reverse polarity and locked-rotor protection
- Soft start
- Control interface with SELV potential safely disconnected from the mains

Connector	Pin	Connection	Assignment / function
KL1	1	L1	Mains supply connection, supply voltage 3~380-480 VAC; 50/60 Hz
	2	L2	Mains supply connection, supply voltage 3~380-480 VAC; 50/60 Hz
	3	L3	Mains supply connection, supply voltage 3~380-480 VAC; 50/60 Hz
PE		PE	Earth connection, PE connection
KL2	1	RSA	Bus connection RS485; RSA; MODBUS RTU
	2	RSB	Bus connection RS485; RSB; MODBUS RTU
	3	GND	Signal ground for control interface
	4	C	Status relay, floating status contact, changeover contact, common connection 250 VAC / 2 A (AC1)
	5	Din1	Digital input 1: enabling of electronics; enabling: open pin or applied voltage 5 to 50 VDC; disabling: bridge to GND or applied voltage < 1 VDC; reset function: triggers software reset after a level change to < 1V
	6	+10 V	Fixed voltage output 10 VDC; +10 V $\pm 3\%$; max. 10 mA; short circuit proof; power supply for ext. devices (e.g. potentiometer)
	7	Ain1 U	Analogue input 1 (set value); 0-10 V; Ri= 100 k Ω ; parametrisable curves
	8	NC	Status relay, floating status contact, break with error

Electrical connections AC

A1) / A2a)

A1) Single-phase capacitor motor (1~ 230 VAC power line)

with TOP wired internally

A2a) Single-phase capacitor motor (1~ 230 VAC power line)

with connection for external TOP

Electrical connections AC D2) / F1a)

D2) Star connection (3~ 400 VAC power line) with TOP

Direction of rotation is reversed by swapping two line phases.

F1a) Delta connection (3~ 400 VAC power line) with TOP

Direction of rotation is reversed by swapping two line phases

Technical parameters & scope

High standards for all ebm-papst products

Here at ebm-papst, we constantly strive to further improve our products in order to be able to offer you the best possible product for your application. Careful monitoring of the market ensures that technical innovations are reflected in the improvements of our products. Based on the technical parameters listed below and the ambience you want our product to operate in, we here at ebm-papst can always work out the best solution for your specific application..

General performance parameters

Any deviations from the technical data and parameters described here are listed on the product-specific data sheet.

Type of protection

The type of protection is specified in the product-specific data sheets.

Insulation class

The insulation class is specified in the product-specific data sheets.

Mounting position

The mounting position is specified in the product-specific data sheets.

Condensate discharge holes

Information on the condensate discharge holes is provided in the product-specific data sheets.

Mode of operation

The mode of operation is specified in the product-specific data sheets.

Protection class

The protection class is specified in the product-specific data sheets.

Service life

The service life of ebm-papst products depends on two major factors:

- The service life of the insulation system
- The service life of the bearing system

The service life of the insulation system mainly depends on voltage level, temperature and ambient conditions, such as humidity and condensation.

The service life of the bearing system depends mainly on the thermal load on the bearing.

The majority of our products use maintenance-free ball bearings for any mounting position possible. As an option, sleeve bearings can be used, which is indicated on the product-specific data sheet wherever applicable.

The service life L10 of the ball bearings can be taken as approx. 40,000 operating hours at an ambient temperature of 40 °C, yet this estimate can vary according to the actual ambient conditions.

We will gladly provide you with a lifetime calculation taking into account your specific operating conditions.

Motor protection / thermal protection

Information on motor protection and thermal protection is provided in the product-specific data sheets.

Depending on motor type and field of application, the following protective features are realised:

- Thermal overload protection (TOP), either in-circuit or external
- PTC with electronic diagnostics
- Impedance protection
- Thermal overload protection (TOP) with electronic diagnostics
- Current limitation via electronics

If an external TOP is connected, the customer has to make sure to connect a conventional trigger device for switching it off.

Products without fitted TOP and without protection against improper use, a motor protection complying with the valid standards has to be installed.

Mechanical strain / performance parameters

All ebm-papst products are subjected to comprehensive tests complying with the normative specifications. In addition to this, the tests also reflect the vast experience and expertise of ebm-papst.

Vibration test

Vibration tests are carried out in compliance with

- Vibration test in operation according to DIN IEC 68, parts 2-6
- Vibration test at standstill according to DIN IEC 68, parts 2-6

Shock load

Shock load tests are carried out in compliance with

- Shock load according to DIN IEC 68, parts 2-27

Balancing quality

Testing the balancing quality is carried out in compliance with

- Residual imbalance according to DIN ISO 1940
- Standard balancing quality level G 6.3

Should you require a higher balancing quality level for your specific application, please let us know and specify this when ordering your product.

Chemo-physical strain / performance parameters

Should you have questions about chemo-physical strain, please direct them to your ebm-papst contact.

Fields of application, industries and applications

Our products are used in various industries and applications:

Ventilation, air-conditioning and refrigeration technology, clean room technology, automotive and rail technology, medical and laboratory technology, electronics, computer and office technology, telecommunications, household appliances, heating, machines and plants, drive engineering. Our products are not designed for use in the aviation and aerospace industry!

Legal and normative directives

The products described in this catalogue are designed, developed and produced in keeping with the standards in place for the relevant product and, if known, the conditions governing the relevant fields of application.

Standards

Information on standards is provided in the product-specific data sheets.

EMC

Information on EMC standards is provided in the product-specific data sheets.

Complying with the EMC standards has to be established on the final appliance, as different mounting situations can result in changed EMC properties.

Leakage current

Information on the leakage current is provided in the product-specific data sheets.

Measuring is according to IEC 60990.

Approvals

In case you require a specific approval for your ebm-papst product (VDE, UL, GOST, CCC, CSA, etc.) please let us know.

Most of our products can be supplied with the relevant approval.

Information on existing approvals is provided in the product-specific data sheets.

Air performance measurements

All air performance measurements are carried out on suction side and on chamber test beds conforming to the specifications as per ISO 5801 and DIN 24163. The fans under test are installed in the measuring chamber at free air intake and exhaust (installation category A) and are operated at nominal voltage, with AC also at nominal frequency, and without any additional components such as guard grilles.

As required by the standard, the air performance curves correspond to an air density of 1.2 kg/m³.

Technical parameters & scope

Measurement conditions for air and noise measurement

ebm-papst products are measured under the following conditions:

- Axial and diagonal fans in direction of rotation “V” in full nozzle and without guard grille
- Backward curved centrifugal fans, free-running and with inlet nozzle
- Forward curved single and dual inlet centrifugal fans with housing

Noise measurements

All noise measurements are carried out in low-reflective test rooms with reverberant floor. Thus the ebm-papst acoustic test chambers meet the requirements of precision class 1 according to DIN EN ISO 3745. For noise measurement, the fans being tested are placed in a reverberant wall and operated at nominal voltage (for AC, also at nominal frequency) without additional attachments such as the guard grille.

Sound pressure level and sound level

All acoustic values are established according to ISO 13347, DIN 45635 and ISO 3744/3745 to accuracy class 2 and given in A-rated form.

When the sound pressure level (L_p) is measured, the microphone is on the intake side of the fan being tested, usually at a distance of 1 m on the fan axis.

To measure the sound power level (L_w), 10 microphones are distributed over an enveloping surface on the intake side of the fan being tested (see graphic). The sound power level measured can be roughly calculated from the sound pressure level by adding 7 dB.

Measuring configuration as per ISO 13347-3 respectively DIN 45635-38:

● 10 measuring points

$d \geq D$

$h = 1,5d \dots 4,5d$

Measurement area $S = 6d^2 + 7d(h + 1,5d)$

Combined level of multiple same-level sound sources

Adding 2 noise sources with the same level results in a level increase of approx. 3 dB.

The noise characteristics of multiple identical fans can be determined in advance based on the noise values specified in the data sheet. This is shown in the diagram opposite.

Example: 8 A3G800 axial fans are on a condenser. According to the data sheet, the sound pressure level of a fan is approximately 75 dB(A). The level increase measured from the diagram is 9 dB. Thus the overall sound level of the installation can be expected to be 84 dB(A).

Combined level of two different-level sound sources

The acoustic performance of two different fans can be predetermined based on the sound levels given in the data sheet. This is shown in the diagram opposite.

Example: There is an axial fan A3G800 with a sound pressure level of 75 dB(A) at the operating point and an axial fan A3G710 with 71 dB(A) in a ventilation unit. The level difference is 4 dB. The level increase can now be read in the diagram as approx. 1.5 dB. This means that the overall sound level of the unit can be expected to be 76.5 dB(A).

Distance laws

Sound power level is independent of distance to the sound source. In contrast to this, sound pressure level decreases the further away the noise source is. The adjacent diagram shows the decrease in level under far sound field conditions. Far sound field conditions apply whenever the distance between microphone and fan is big when compared to fan diameter and wavelength to be considered. For more information on far sound field, please consult the relevant literature on this complex topic. Per doubling of distance, the level in the far sound field decreases by 6 dB. In the near field of the fan, other correlations apply and the decrease in levels can be considerably smaller. The following example only applies to far sound field conditions and can vary strongly depending on the installation effects:

With an axial fan A3G300, a sound pressure level of 65 dB(A) was measured at a distance of 1 m. According to the adjacent diagram, at a distance of 20 m we would get a reduction by 26 dB, i.e. a sound pressure level of 39 dB(A).
